

As an amateur radio operator, I fear RM-10521 will cause unwanted interference in the 70cm band, as FRS Radios currently do in GMRS. Even at low power, they can interfere with legal communications they are near. A rule change like this can cause the same type of abuse experienced with GMRS and FRS users. I see no practical use for this in the USA. James Wellman KC9AHC - WPQZ515
